In 2017, 9,908 Latinos were newly diagnosed with HIV in the U.S. – that is approximately – 27 per day.

In 2017, Latinos represent 18% of the U.S. population – but account for – 25.6% of all new HIV diagnoses and 21.9% of all new AIDS diagnoses.
1 in 6 Latinos living with HIV are **unaware** they have it.

Latinos who are unaware cannot take advantage of HIV treatment and may unknowingly transmit HIV to others.

53% of Latinos have never been tested for HIV in their lifetime.
Unequal access to PrEP, a daily pill to prevent HIV, puts Latinos at higher risk (2016)

- White users: 73%
- Latino users: 13%
- Black users: 11%
- Other: 7%

Only 49% of Latinos living with HIV have achieved an undetectable viral load; therefore cannot transmit HIV to sexual partners (2015)

- Diagnosed with HIV: 84%
- Receiving care: 59%
- Retained in care: 50%
- Virally suppressed: 49%

U=U: Undetectable = Untransmittable
Latinos account for 9 out of 10 new HIV cases among Latinos in 2016. Out of these 9, 8 were among Latino MSM.

In 2017, 52% of Latinos diagnosed with HIV who disclosed their place of birth were foreign-born. 78% of all foreign-born were Latino MSM.
About 1 in 4 Latina trans woman is estimated to be living with HIV.

If current HIV rates persist:

1 in 5 Latino MSM
1 in 48 Latino men
1 in 227 Latina women

Maybe diagnosed with HIV in their lifetime.
