When taken as prescribed, HIV treatment can make your viral load undetectable, which means you can’t transmit HIV to your sexual partner.

“I social distance to stay healthy these days. I also remain undetectable to keep my sexual partners safe.” —Anthony Navarro

When taken as prescribed, HIV treatment can make your viral load undetectable, which means you can’t transmit HIV to your sexual partner.

Stay Undetectable  
Be Untransmittable

UNLIKE OTHER VIRUSES
HAVING HIV AND NOT PASSING IT ON IS AT YOUR FINGERTIP
